SERVING FAMILIES IN THE INTERMOUNTAIN WEST SINCE 1941

SugarHouse Awning is a leader in designing and fabricating quality custom pipe frame patio canopies even for the most unique homes and structures.

FRAME

- The frame and rafters along the top of the canopy are made of sturdy galvanized steel pipe
- Posts are 1" powder coated galvanized pipe

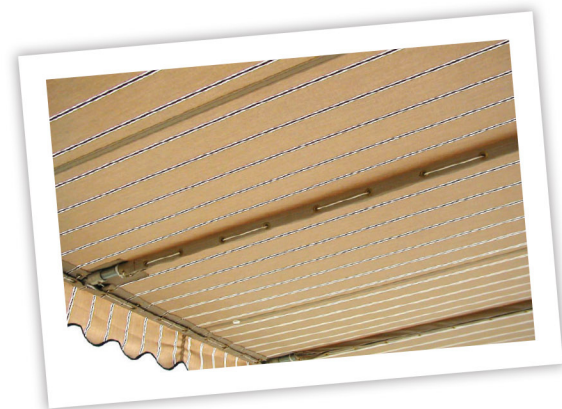

VALANCE

The scalloped valance along the bottom of the awning is an optional feature available in many different sizes and styles

FABRIC

Whether you are installing a new patio canopy, or updating an existing one, SugarHouse Awning's extensive selection of fabric options gives you complete control over the look of the awning for your home or business. Our pipe frame patio canopies are made from fabric that is exceptionally durable and highly customizable. Our fabrics:

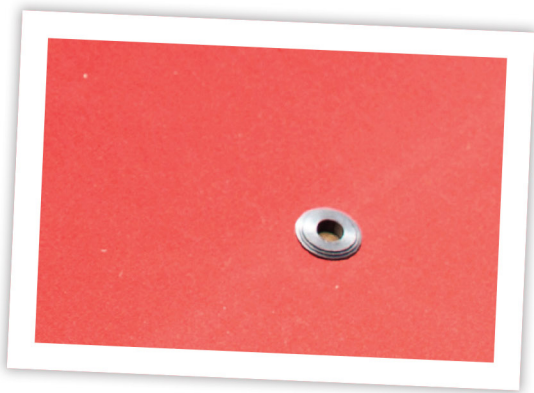

- Are made with reliable, name-brand outdoor fabrics such as Sunbrella® and Dickson®
- Carry a 10 year limited warranty
- Come in numerous color options in both striped and solid patterns

LACING

The canopy has lace pockets that securely attach the front bar and rafters to the fabric cover. This prevents the fabric from lifting up from the frame in the wind

DRAIN GROMMETS

- Optional drain grommets can be placed directly behind the front bar in order to prevent water from puddling, which can damage both the fabric and framework
- Available in black or white

USE

- Pipe frame patio canopies are designed to provide shade and protection from UV rays and rain
- The canvas material of the canopy must be removed before winter. Accumulation of snow on a patio canopy can damage both the fabric and the supporting framework
- The supporting pipe framework is galvanized and may be left standing during the winter months, or taken down and stored
