### QUESTIONS?

Contact SugarHouse Industries customer support at: 801-563-9600

8:00 am – 5:30 pm (MST),  
Monday through Friday

## WARNING

- Placing items on seat in direct sunlight may cause color to permanently transfer to your marine upholstery.
- Avoid laying sharp items on your upholstery as they may nick, or cut the vinyl.
- Your boat should be clean and dry before long term storage to avoid mold and mildew growth on your boat's upholstery.

## WARRANTY

**1 YEAR LIMITED** warranty against defects in marine-grade vinyl.

## CARING FOR YOUR BOAT'S UPHOLSTERY:

Marine grade vinyl is designed to endure harsh marine conditions but without proper care and maintenance it will break down much faster. The best way to prolong the look and performance of boat seats and upholstery is to keep it clean and out of the sun. Regular application of a UV inhibitor such as 303 Aerospace Protectant is highly recommended.

## CLEANING:

Apply Driven Premium Polymer Wash and let it sit for several minutes. Use a very soft-bristled brush to scrub away debris, dirt, and mold. Using a soft brush is important, especially on vulnerable spots like your seat seams. Scrubbing too hard or with particularly tough bristles can damage your vinyl and make it look worn before its time. After you've loosened dirt and mold, it's important to rinse very well. This is true even if you're using a gentle cleaner like ammonia and water or vinegar and baking soda. Once you're done rinsing, dry everything carefully. Mold spores can feed off any left behind cleaning residue, and drying your vinyl thoroughly helps prevent mold from even getting a foothold.

When it comes to vinyl and rubber, we also recommend Driven Vinyl/Leather/Rubber protector. After washing, use a soft sponge to gently rub the protector into your seats, and let it sit for thirty minutes. Then use a soft microfiber towel to buff the formula into the seats. This will help protect your seats against extreme sun and cold and stain-protect them against spilled drinks and fluids without being greasy or slippery.

**CAUTION:** Never use a high-powered pressure washer or commercial car wash sprayer. AIR DRY ONLY.
